

KRISTHIAN O. PINILI

BS in Computer Science · AWS Certified Machine Learning Specialty · Cisco Certified · CSS NCII
kristhianpinili@gmail.com | 0908-169-3403 | linkedin.com/in/kristhian-pinili | github.com/chosenvision | Batangas City, PH

PROFESSIONAL SUMMARY

Fresh Computer Science graduate with 4 years of hands-on experience in enterprise system implementation, business process analysis, application support, and structured data management. Designed and deployed a full service management system that centralized operations across 5+ departments, reducing processing overhead by 40% and improving workflow efficiency by 25% — demonstrating the process mapping, configuration, and stakeholder collaboration skills central to consulting roles. Built and maintained a 24-table relational cloud database following strict data integrity principles across transactions, user records, audit logs, and support tickets. AWS Certified Machine Learning Specialist and Cisco Certified, with strong analytical, documentation, and cross-functional communication skills and a proven ability to learn and apply new systems quickly.

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern | National Transmission Corporation

Jun – Aug 2025

- ▶ **Implemented a division-wide service management system** that centralized incident intake, automated ticket routing, and tracked resolution workflows across 5+ departments — reducing manual processing time by **40%** and improving resolution efficiency by **25%**, directly reflecting the business process improvement and system configuration work common in enterprise consulting.
- ▶ **Analyzed existing business processes** across multiple departments to identify inefficiencies and gaps, then designed and deployed a structured solution that eliminated ~60% of redundant operations — demonstrating requirements gathering, process mapping, and solution design skills applicable to ERP and enterprise platform implementations.
- ▶ **Collaborated with stakeholders** throughout requirements gathering, deployment, and post-launch support — communicating technical solutions clearly to non-technical teams, gathering feedback, and iterating on configuration to maintain **99%+ system uptime**.

QA Engineer | Kill Boring Dead

Apr – Jun 2025

- ▶ **Validated application functionality and data integrity** across enterprise software systems pre- and post-deployment — achieving **100% critical defect detection** through structured test case design covering functional, integration, and regression scenarios.
- ▶ **Documented and tracked defects** using structured defect management workflows, reducing post-launch support issues by **30%** and producing clear technical documentation that supported fast resolution by cross-functional development teams.
- ▶ **Applied systematic root-cause analysis** to identify recurring failure patterns in pre-release data, enabling proactive issue resolution and consistently meeting 100% of quality and compliance benchmarks across multiple concurrent client products.

Digital Coordinator & Casting Agent | ModelManagement.com

Jan – Jun 2025

- ▶ **Managed end-to-end data records** for 50+ clients on a digital platform — maintaining accurate, organized, and up-to-date profiles through a structured intake and verification process, ensuring clean data across a high-volume system.
- ▶ **Coordinated workflows** between platform users and internal operations, resolving data discrepancies, supporting onboarding, and expanding the active client network by **35%** through systematic, data-driven coordination.

NOTABLE PROJECTS

StrokeSense — Multi-Tier Cloud Application with Data & Support Systems | Lead Application Developer

2026

- ▶ **Designed and configured a 24-table relational cloud database** using a SQL-over-NoSQL strategy — spanning user records, transaction data (ppgData), file storage (rawFiles, processedFiles), predictions, audit logs (auditLogs), session tracking (deviceSessions), and a complete support ticket system (supportTickets, supportMessages, notifications, roles, permissions) — demonstrating the structured data modeling and configuration discipline required for enterprise platform work.
- ▶ **Built an integrated service desk system** with priority-based ticket triage, category classification, message threading between users and administrators, and full status tracking from submission through escalation to resolution — showcasing hands-on experience designing and managing enterprise support workflows end-to-end.
- ▶ **Implemented a layered security and access control framework:** JWT authentication, hardware session handshake with expiration, HMAC data integrity verification, AES-256 encryption, and **five atomic admin roles** (Super Admin, General Admin, Technical Admin, User Admin, Medical Analyst) each with scoped permissions and quarantine capabilities — mirroring the authorization and access management principles in enterprise platform security.

ASTRA: Adaptive Sorting with Tree-Based Algorithm Selection | Thesis | Lead Architect

2025

- ▶ Designed and validated a **zero-training decision-tree framework** across 10^7 data elements — delivered **1.98x average speedup** and peak gains of **8,948x** over std::sort, validated via ANOVA and Kruskal-Wallis statistical testing — demonstrating strong analytical thinking, rigorous methodology, and the ability to deliver measurable, data-driven results.

TECHNICAL SKILLS

Business & Systems Analysis: Business process mapping & analysis | Requirements gathering | System configuration & deployment | Workflow automation | Gap analysis | Stakeholder communication

Application & Data Support: Incident triage & root-cause analysis | Defect tracking | Service desk management | Audit logging | Data integrity enforcement | System monitoring

Database & Data Management: SQL / SQLite | Relational schema design (24-table) | Cloud database management (Convex) | CSV pipeline processing | Statistical analysis (ANOVA, Kruskal-Wallis)

Cloud & Infrastructure: AWS: EC2, S3, Lambda, ML | FastAPI / REST APIs | IaaS / PaaS / SaaS | Azure AZ-900 (pursuing) · AZ-104 (coming soon) | Git & GitHub

Development: Python | JavaScript | Dart / Flutter | HTML & CSS | SQL / SQLite | Cisco Certified | TCP/IP | Network security

Certifications: AWS Certified Machine Learning Specialty | Cisco Certified Network Associate | CSS NCII – Best in Computer System Servicing (Awarded Best)

EDUCATION

Bachelor of Science in Computer Science

2022 – 2026

Batangas State University · Golden Country Homes, Barangay Alangilan, Batangas City

Awarded Best in Computer System Servicing (NCII) · Cisco Certified · AWS Certified ML Specialist · Thesis: ASTRA (8,948x peak speedup over std::sort)
